## FOR IMMEDIATE RELEASE

### **Caltrans Begins Pavement Repair on State Route 1 (Sepulveda Blvd.) South of Los Angeles International Airport**

*Lane Closures Scheduled at Night to Minimize Inconvenience to the Public*

LOS ANGELES — The California Department of Transportation (Caltrans) advises travelers that a pavement repair project, with some lane closures at night, is scheduled to start Monday, May 7, on Sepulveda Boulevard (State Route 1) in the city of El Segundo, south of the tunnel at Los Angeles International Airport (LAX).

At least one lane will remain open for vehicles heading in either direction on Sepulveda Boulevard while the work is underway at night through the end of June. The project will repair pavement on Sepulveda Boulevard from Rosecrans Avenue to Imperial Highway, a distance of more than two miles.

The project is scheduled to start on the northbound lanes of Sepulveda Boulevard, beginning at 11 p.m. Monday, May 7. At least one lane will be kept open for northbound vehicles. The lane closure is scheduled to end by 6 a.m. Tuesday, May 8.

Similar lane closures, either northbound or southbound, are expected on most nights through the end of June. The schedule is weather-permitting and subject to change.

The \$1.5 million project includes replacement of deteriorated sections of pavement and application of slurry seal to preserve the pavement and extend its life. The contractor is All American Asphalt of Corona, Calif.

Drivers will see more pavement repair and maintenance work on California highways as a result of SB 1, the state's new transportation funding. Similar to SB 1-funded projects, this pavement repair project on Sepulveda Boulevard is necessary due to heavy traffic volumes that have caused the pavement to deteriorate over time.
